APPLIED GEOCHEMISTRY

Journal of the International Association of Geochemistry and Cosmochemistry

Executive Editor: B HITCHON, *Natural Resources Division, Alberta Research Council, Edmonton, Alberta, Canada*
Supported by a distinguished International Editorial Board and a Board of Associate Editors

Applied Geochemistry is an international journal devoted to original research papers in geochemistry and cosmochemistry which have some practical application to an aspect of human endeavour, such as the search for resources, their upgrading, preservation of the environment, agriculture and health. Some of the wide range of topics to be covered by *Applied Geochemistry* are:

* the search for energy resources such as petroleum, natural gas, geothermal energy, oil shales, tar sands and coal, as well as uranium;
* the search for mineral resources, both metalliferous and non-metalliferous;
* the upgrading of energy and mineral resources where there is a direct geochemical application e.g. water-rock interaction during *in situ* recovery of tar sands;
* the use of geochemical knowledge for the protection of the environment from pollution;
* medical geochemistry or the association of diseases (human health) with, for example, trace elements in soils and water;
* agricultural aspects of geochemistry e.g. association of growth with trace elements in soils and water.
